

Committed to Transportation

Cambridge Systematics, Inc. specializes in transportation services, tools, and products and is dedicated to ensuring our clients' transportation investments deliver the best possible results. We work with both public and private sector agencies at the local, state, national, and international levels and consistently strive to improve the quality of transportation services now and for future generations.

Cambridge Systematics is committed to partnering with WTS and supporting their local chapters. Several of our staff members are actively involved in WTS across the country and, in 2012, we were named WTS-Boston Chapter Employer of the Year. We remain focused on our goals of providing employees with challenging opportunities to support personal and professional growth, foster leaders, and advance the state of the practice.

As a recent project example, we currently are leading the Massachusetts Department of Transportation (MassDOT) Asset Management Strategic Plan. For this project, Cambridge Systematics is developing an enterprise strategy for asset management for the Highway Division. As part of this process, we are evaluating existing business processes, system functionality, data, and information technology technical architecture; identifying gaps between current practices and national best practices; and developing an implementation plan that presents a strategy for coordination and continued improvement. The plan builds on MassDOT's continued efforts to manage assets more effectively.
