

Project Manager, Maryland

Rybinski Engineering is seeking a creative and motivated Project Manager to successfully lead projects with the Maryland Department of Transportation (MDOT) and its Transportation Business Units (TBUs). The ideal candidate will be a registered professional (Professional Engineer, Certified Planner, Project Management Professional, or similar credential) with at least seven years of experience in transportation engineering or planning. Experience working with MDOT SHA and/or MDTA, either as a consultant or as an employee, is essential to the success of this position.

The opportunities for career advancement at Rybinski Engineering are uniquely diverse and growth oriented with professional organization support, networking, encouraged attendance at professional development events, and project management training throughout your career. We invest deeply in the development of our people. As a result, this is a highly competitive position; you will work with many of the best transportation professionals in the region on high-profile projects.

Work-life balance

Rybinski Engineering is unique in our industry in the flexibility and autonomy we provide all of our people. As a fully remote firm since 2012, we provide what you need to be successful:

- Flexible hours within a 37.5-hour work week
- State-of-the-art home office equipment supplied and maintained by the company
- A collaborative mindset where we openly communicate with each other and clients
- A highly competitive compensation package including full benefits, generous paid time off, and 10 holidays

More about [work-life balance at Rybinski Engineering](#).

Location

We are fully remote with a client base in Maryland, Pennsylvania, and Delaware. To provide exceptional service to our clients and each other, we have frequent in-person meetings, offer on-site client support at times, and are available for field work on short notice. Because this position is responsible for managing Maryland contracts, we anticipate hiring a project manager located in Maryland.

Responsibilities

Rybinski Engineering is looking for a strong technical leader to facilitate high-level transportation programs and create clear, actionable plans to achieve results for our clients. This position is for you if you are highly skilled in:

- Managing project teams of traffic engineers and planners
- Performing high-quality technical work in transportation engineering and/or planning
- Maintaining client relationships
- Creating structure for projects and leading project activities
- Coaching others to achieve excellence
- Collaborating with diverse stakeholders

The successful candidate will be responsible for overseeing and providing technical expertise on projects in areas such as:

- Transportation safety
- Traffic operational analysis
- Data-driven transportation planning and project prioritization
- High-level stakeholder coordination
- Big data analytics
- Data visualization
- Public education
- Transportation systems management and operations
- Traffic operations modeling
- Innovative technology

Position Qualifications

- Bachelor of science in civil engineering
- Professional Engineer (PE) license, American Institute of Certified Planners (AICP) certification, Professional Transportation Planner (PTP) certification, or Project Management Professional (PMP) certification
- At least seven years of transportation experience with MDOT SHA and/or MDTA projects (we will carefully consider candidates with more experience for more senior positions)
- Proven project management experience
- Valid driver's license
- Ability to travel to client sites with same-day notice within Maryland, and potentially Pennsylvania and Delaware as well
- Effective written and oral communication skills
